

Direct Embedding

Joris Beau

EPFL - LAMP

Project in computer science

Directed by **Martin Odersky**, Supervised by **Vojin Jovanovic**

January 14, 2015

Outline

- 1 Introduction
 - Motivation & Goal
 - Initial constraints
- 2 Implementation
 - Simple cases prototype
 - Example
- 3 Demo

Motivation

- embedding DSLs, simply!
- Slick

Goal

- 1 Implement a core prototype
- 2 Make it work
- 3 Extend it

Beginning

No quasiquote

but ...

Beginning

but

we can access to the
symbols

→

@ANNOTATIONS

Objects

Cases	Object	Nested	Classes
<code>val value</code>	✓	✓	✓
<code>def foo</code>	✓	✓	✓
<code>def foo(args)</code>	✓	✓	✓
<code>def foo[T, U]: (T, U)</code>	✓	✓	✓
<code>def foo[T, U](t: T, u: U): (T, U)</code>	✓	✓	✓
<code>def foo[T](t₁: T)(...)(t_a: T)</code>	✓	✓	✓

Language specification

if	X
while	X
do while	X
lazy val	X
return	X

Overview

An example: embedded code

Annotate

```
@reifyAs(JustArgs)  
def justArgs(x: Int): Int = ???
```

Lift

```
lift {  
  ObjectExample.justArgs(1)  
}
```

An example: tree

Tree

```
ObjectExample.justArgs(1)  
  annotated  
directembedding.reifyAs(JustArgs)
```

Raw tree

```
Apply(Select(Ident(ch.epfl.directembedding.test.ObjectExample),  
TermName("justArgs" )), List(Literal(Constant(1))))
```

An example: macro

From symbol, arguments, type, we can use the annotation to reify the tree:

Macro

\Rightarrow macro q"..."

Returns

JustArgs.apply(1)

Going further

• ...

Demo

Thank you
